

DBMS Assignment -2

Ques-1

1. Entity Relationship diagram
2. Relational model
3. Object oriented model
4. Integrity constraints

Ques-2

Ans- Data Abstraction helps simplify complex healthcare databases by hiding unnecessary details and showing only relevant information to users. Doctors, nurses, staff, and administrators interact with patient records through simplified interfaces without needing to understand how data is stored internally.

Ques-3

Ans- Benefits:

- i) Simplified data access: Healthcare professionals can easily access patient info without understanding database
- ii) Improved security: Sensitive data is protected
- iii) Better data management with data abstraction
- iv) Reduced complexity

Challenges:

- i) Implementation complexity: Designing abstraction requires development effort
- ii) Performance overhead: Abstraction may affect system
- iii) Maintenance difficulty

ues - 3 ---

Ans - University ER diagram
